

TRULOK

Suspension Systems

Armstrong

TRULOK

ARMSTRONG'S TOTAL CEILING SOLUTIONS

The Trulok suspension system product range forms an integral part of Armstrong's total ceiling solutions policy. Armstrong now offers its customers and specifiers a complete range of ceiling panels including mineral, soft fibre, wood and metal and a wider choice than ever of suspension systems providing solutions for all elements in today's challenging construction environments.

THE TRULOK RANGE

The Trulok range includes a full range of solutions for all ceiling suspension requirements: 15mm, 24mm, bandraster, designer grids including Silhouette and Interlude plus a comprehensive range of performance systems for special applications such as swimming pools etc.

We also include our Axiom range of perimeter solutions and a comprehensive programme of special size options is available in most ranges. A range of either stab or hook systems are available to meet the mechanical preferences of the installer.

To complete the portfolio we also offer a technical test programme that provides fire, loadings and environmental accreditation.

QUALITY

Trulok suspension systems are manufactured for Armstrong both by its joint venture company WAVE (Worthington Armstrong Venture) and through various alliances with other companies who are regarded as specialists in their fields of engineering.

WAVE operates on a global basis, and brings to its various European operations world class practice on the most technologically advanced equipment.

SERVICE

Trulok suspension systems are manufactured in three European plants, strategically located to serve all our European customers. Additionally, both Armstrong and WAVE can draw upon their global manufacturing capabilities for both speciality products and manufacturing support.

In addition to WAVE's manufacturing sites, Armstrong stocks suspension systems in strategically located distribution centres throughout Europe. This allows the customer the convenience of mixed product shipments, combining suspension systems with other Armstrong ceiling products, optimising bulk shipments direct from their manufacturing locations.

INTEGRATION

Trulok suspension systems are designed for use with the wide variety of Armstrong ceiling products, mineral, soft fibre, metal, wood and special solutions.

THE WAVE STORY

WAVE has three manufacturing locations in Europe, three in the USA including the new facility in Aberdeen, Maryland which is one of the world's largest grid facilities, plus one in China.

Armstrong's commitment to the

Our environmental efforts in the life-cycle of our products start with Design.

CE marking - What is it ?

BRE (Building Research Establishment)

As the world's foremost producer of suspended ceiling systems, we know how important it is to be transparent in regard to the effect our operations have on the environment. To get an objective look at us and our process we have identified the BRE (Building Research Establishment) and their method of profiling construction products and systems as the leading method of environmental assessment available in the UK today.

BRE as the authors of the 'Green Guide to Specification' have devised a methodology in partnership with Government and 24 trade associations to form a single, consistent approach for applying LCA (Life Cycle Assessment) to all types of construction products.

The data at the core of the 'Green Guide' is generated using LCA which is a method of evaluating environmental impact of a system throughout its full life cycle. This method fully complies with ISO 14041.

This LCA methodology selects the impact categories (below) and the environmental burdens are then assigned to each of these appropriate impact categories :

Climate change

Acid depletion

Ozone depletion

Pollution to air – human toxicity

Pollution to air – low level ozone depletion

Pollution to water – human toxicity

Pollution to water – ecotoxicity

Pollution to water – eutrophication

Minerals extraction

Waste disposal

Transport pollution

Water extraction

Uniquely, the BRE then 'normalise' the data into 'Ecopoints' (related to the average UK citizens impact on the environment) and then categorises the result between 'A', indicating least environmental impact and 'C', which indicates the greatest impact.

Based on a 60 year project life all of the Armstrong ceiling systems (grid and tile) assessed received a green guide rating of 'A'.

For further information see also our "A guide to sustainable suspended ceiling systems".

CE stands for Conformité Européenne, which translated literally, means "European Conformity".

The CE mark is a products "passport" for entry into the EEA (European Economic Area) and indicates that the product complies with the requirements of the applicable European Directive.

For construction products the European Directive is the Construction Products Directive (89/106/EEC).

The CPD identifies the essential requirements for products (and total projects) such that they are fit for intended use as:

- Mechanical resistance and stability
- Safety in case of fire
- Hygiene, health and environment
- Safety in use
- Protection against noise
- Energy economy and heat retention

For suspended ceilings the way in which we must test and communicate performance for these essential requirements has been defined in a new standard published in the "Official Journal"

EN 13964 Suspended Ceilings – Requirements and Test Methods.

What does this mean?

This standard identifies how the ceiling components must be tested against the essential requirements to identify a performance classification. It also indicates how the manufacturer must ensure that their products maintain these levels of performance on an ongoing basis.

On 1st January 2006, it will become **mandatory for all suspended ceilings** and accompanying suspension systems (in the scope of EN 13964) **to carry the CE mark** and the accompanying essential requirement test information.

From 1st January 2006, onwards, non-CE marked materials will no longer be saleable into the EEA.

What next?

Armstrong is committed to working with this new standard and ensuring that the transition from current to new test standards will be an invisible and seamless one for our Customers.

If there are any queries on this or a related issue, please call Armstrong's Internal Technical Sales.

THE TRULOK RANGE

The Trulok range includes the new innovative **Peakform** universal main runners with the staked-on **Superlock** clip both in 24mm and 15mm widths. A selected range of standard Prelude 24 XL² long cross tees and standard Prelude 15 XL² cross tees are available with the **Peakform** feature.

All stab cross tees now have the NEW XL² clip for even faster installation.

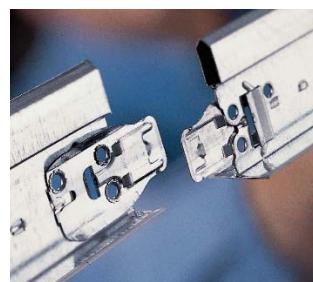

Apart from 24mm and 15mm grid, the Trulok range also covers aesthetic solutions. Axiom Profiles for changes in level and Axiom Transitions for a flush transition with plaster margins. Bandraster, T 35 series, long span systems including a full complement of accessories are available for exposed, concealed and industrial solutions.

All key module sizes are supported and special size options are available in many of the ranges. Both fire rated and lower cost options are a part of each of the most commonly used systems. Stab and hook type systems are available to meet the preferences of every installer. Trulok suspension systems are designed for use with the wide variety of Armstrong ceiling products, mineral, soft fibre, metal, wood and special solutions.

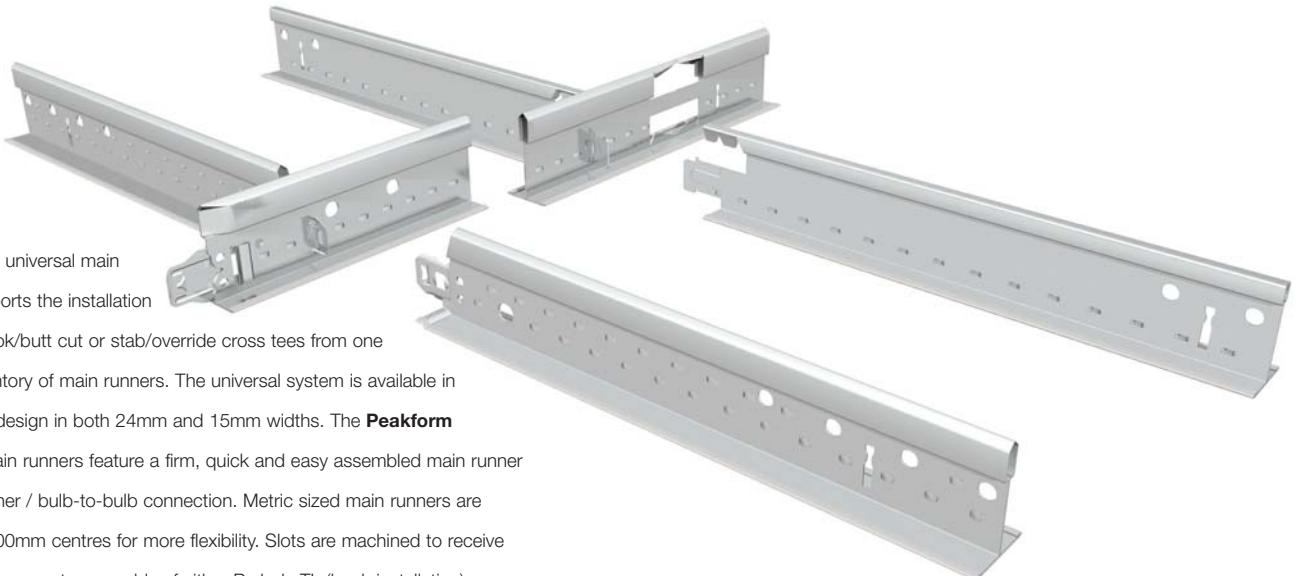

Peakform is an innovative design for main runners and cross tees. The taller **Peakform** profiles are engineered to create a stronger, more stable suspension system making installation both faster and easier.

Superlock is an industry first staked-on clip for main runners which provide tighter, secure bulb-to-bulb connections; connections are confirmed by an audible click; main runners are easily disconnected and reconnected laterally.

Prelude universal main runner

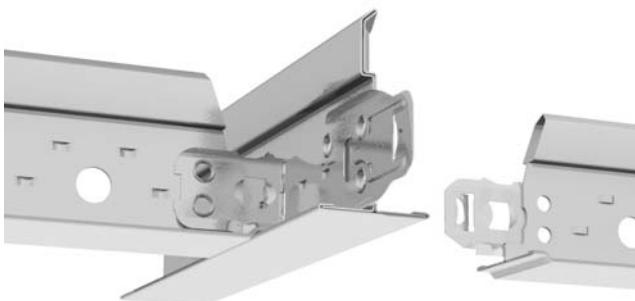

The Prelude universal main runner supports the installation of either hook/butt cut or stab/override cross tees from one simple inventory of main runners. The universal system is available in **Peakform** design in both 24mm and 15mm widths. The **Peakform** universal main runners feature a firm, quick and easy assembled main runner to main runner / bulb-to-bulb connection. Metric sized main runners are slotted at 100mm centres for more flexibility. Slots are machined to receive positive and accurate assembly of either Prelude TL (hook installation) or Prelude XL² (stab installation) cross tees. The staked-on **Superlock** clip allows for main runners to be disconnected and reconnected laterally in low-clearance areas or in the middle of a room.

Prelude XL² "click" installation

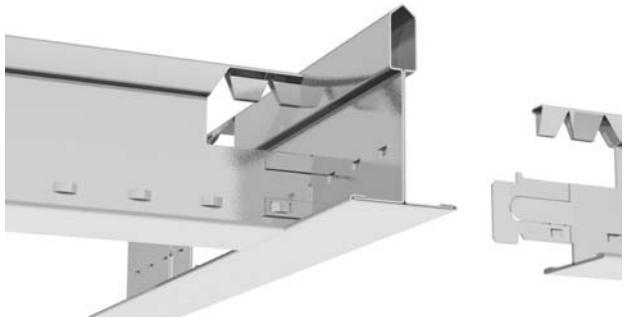

Prelude XL² cross tees in both 24mm and 15mm widths feature an advance stab system that locates with an audible "click", ensuring a solid installation at all times. The stab end is precision stamped from a separate piece of high grade steel permitting an increased accuracy and economy of production over the more conventional integral forming of the cross tee ends. A selected range of long standard Prelude XL² cross tees and standard Prelude 15 XL² cross tees feature the new **Peakform** design.

The cross tees are inserted to the right of each other through the main runner slots and easily pushed home.

Prelude TL "hook" installation

Prelude TL cross tees in both 24mm and 15mm widths feature an integrally formed hook nose. This popular installation system has been a feature of Armstrong Trulok suspension systems for over 20 years and its proven ease of assembly and precise butt cut joint has been a favourite of installers. Cross tee alignment is ensured by locating the tees to the right hand side of the adjoining section.

Designer grids

Armstrong's designer range, Silhouette, Interlude and Axiom provide aesthetically enhanced grids. Silhouette creates a level ceiling surface, providing a flush appearance while Interlude gives a clean sophisticated visual that is created by the unique double reveal. Axiom Profiles and Transitions provide an aesthetic solution for changes in level and the flush transition with plaster margins.

Other systems

Trulok's extensive range of performance grids also includes Bandraster, T35, Semi-concealed and Long Span, completing Trulok's suspension solutions.

Physical detail

All grids are made from double-web galvanised steel with a surface finish of baked polyester paint.

Stitching

All Prelude components feature "stitched" construction.

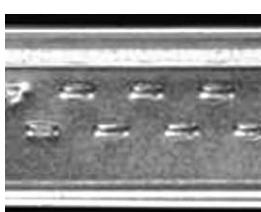

The two metal layers of the vertical web are mechanically locked together in a sophisticated in-line process. Stitching enhances the torsional resistance and general "feel" of the Prelude components.

Full range of accessories and perimeter solutions

Trulok suspension systems are offered with a complete range of commonly required accessories and perimeter solutions.

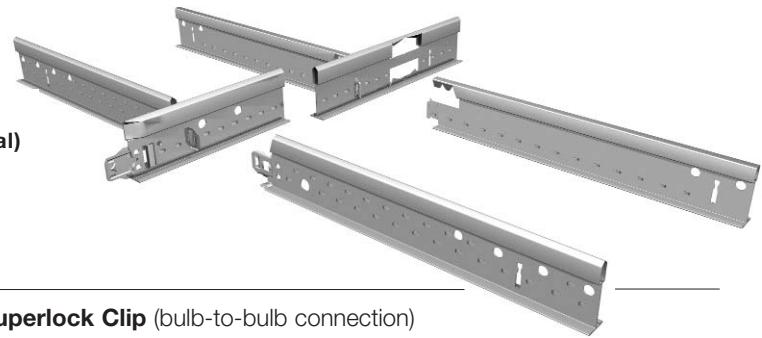

Colour

Trulok suspension system components are manufactured in a range of colours and metal finishes including Global White to complement Armstrong ceiling tiles. For complete information call Internal Technical Sales.

Section Drawings

Interlude Main Runner

Interlude 15 XL² Cross Tees

Interlude 15 XL² Cross Tees

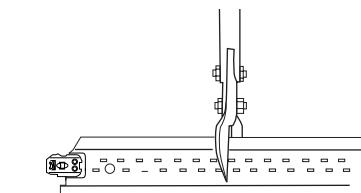

All measurements in millimetres. All sizes are nominal.

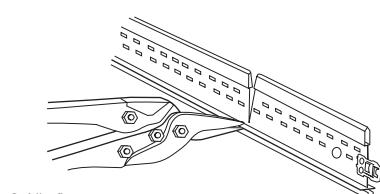

Interlude XL²

- The stepped flange profile provides a unique double reveal visual
- Unmitred intersections allow for cross tee installation at any main runner slot position

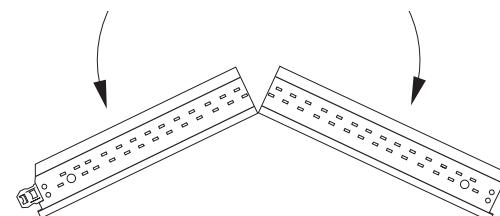

Interlude XL² can be easily field cut with snips in 3 simple steps:

1. Cut down through bulb and web

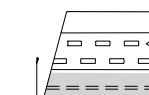

2. Nip flanges

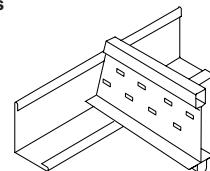

3. Bend away from bulbs to snap off centre rail

Advisory note

All photographic and design elements supplied in this brochure do not necessarily reflect any recommendation by any of the companies named in this brochure as to the proper use or recommended methods of installation of suspended ceilings and are supplied only as informative material.

For technical reasons in printing, differences may appear between colours printed in this brochure and the actual

product. The choice of colours should always be made from a sample of the product.

All statements and technical information contained in this brochure, or any publication of the companies named in this brochure, relating to Armstrong ceilings are based on results obtained under laboratory test conditions. It is the responsibility of the user to verify with the seller of the products in writing
